### **Advance feature:**

### **SECURITY FEATURES:**

#### **Login Security:**

- Sign-in using your password and your cell phone to vastly improve login security. This is called Two Factor Authentication and is used by banks, government agencies and military world-wide for highest security authentication.
- Includes two-factor authentication, also referred to as cell phone sign-in.
- Enforce strong passwords among your administrators, publishers and users. Improve login security.
- Checks the strength of all user and admin passwords to enhance login security.

#### **Blocking Features:**

- Real-time blocking of known attackers.
- Block entire malicious networks. Includes advanced IP and Domain WHOIS to report malicious IP's or networks and block entire networks using the firewall. Report security threats to network owner.
- Rate limit or block security threats like aggressive crawlers, scrapers and bots doing security scans for vulnerabilities in your site.
- Choose whether you want to block or throttle users and robots who

break your security rules.

### **Security Scanning:**

- Scans for the HeartBleed vulnerability - included in the free scan
- Scans core files, themes and plugins
- See how files have changed. Optionally repair changed files that are security threats.
- Scans for signatures of over 44,000 known malware variants that are known security threats.
- Scans for many known backdoors that create security holes including C99, R57, RootShell, Crystal Shell, Matamu, Cybershell, W4cking, Sniper, Predator, Jackal, Phantasma, GFS, Dive, Dx and many many more.
- Continuously scans for malware and phishing URL's including all URL's on the Google Safe Browsing List in all your comments, posts and files that are security threats.
- Scans for heuristics of backdoors, trojans, suspicious code and other security issues.

### **Firewall setting:**

- Includes a firewall to block common security threats like fake Google bots, malicious scans from hackers and botnets.

### **Monitoring Features:**

- See all your traffic in real-time, including robots, humans, 404 errors, logins and logouts and who is consuming most of your content. Enhances your situational awareness of which security threats your site is facing.
- A real-time view of all traffic including automated bots that often constitute security threats that Javascript analytics packages never show you.
- Real-time traffic includes reverse DNS and city-level geolocation. Know which geographic area security threats originate from.
- Monitor your DNS security for unauthorized DNS changes.
- Monitors disk space which is related to security because many DDoS attacks attempt to consume all disk space to create denial of service.

**Multi-Site Security:**

- Our security plugins security for multi-site also scans all posts and comments across all blogs from one admin panel.

**IPv6 Compatible:**

- Fully IPv6 compatible including all whois lookup, location, blocking and security functions.

**CACHE FEATURES:****Google Page Speed improvements in overall site performance****Optimize Features:**

- Improved web server performance. sustain high traffic periods
- Transparent content delivery network (CDN) management with Media Library, theme files and WordPress itself
- Mobile support: respective caching of pages by referrer or groups of user agents including theme switching for groups of referrers or user agents
- Caching of (minified and compressed) pages and posts in memory or on disk or on CDN (mirror only)
- Caching of (minified and compressed) CSS and JavaScript in memory, on disk or on CDN
- Caching of feeds (site, categories, tags, comments, search results) in memory or on disk or on CDN (mirror only)
- Caching of search results pages (i.e. URIs with query string variables) in memory or on disk
- Caching of objects in memory or on disk
- Minification of inline, embedded or 3rd party CSS (with automated updates)
- Browser caching using cache-control, future expire headers and entity tags (E-Tag) with "cache-busting"

**ADVANCE SEO OPTIMIZATION:****Our Premium SEO Optimize Concept contains all the features****Title & Meta format:**

You can setting up custom page titles, meta description, Meta keywords, Meta robots and social Meta using defined format tags for homepage, post, pages, category, tags, custom taxonomies, archives, authors, search, 404 page and pagination

### **Off page optimization:**

- Back link Builder – automatically add your link to thousands of different website directories that will automatically provide free back links
- Link Builder – improve your site internal link building.
- 301 Link Redirect – useful for any permalink changes
- Social Stats - keep track of your social network size

### **Advanced setup:**

- Files Edit - allows you to edit the robots.txt and .htaccess files.
- W3C Validator - Mass Check the markup (HTML, XHTML,) of your pages/posts/custom taxonomies.
- SEO Insert Code - Add custom code into < head > and wp\_footer

## Our Project Development Process

### ❖ Start Communication with client for Requirement Gathering

This is the first step where the user initiates the request for a desired software product. Our team contacts the service provider and tries to negotiate the terms. The team holds discussions with various stakeholders from problem domain and tries to bring out as much information as possible on their requirements. The requirements are contemplated and segregated into user requirements, system requirements and functional requirements.

### ❖ Research System Analysis

At this step the developers decide a roadmap of their plan and try to bring up the best software model suitable for the project. System analysis includes Understanding of software product limitations, learning system related problems or changes to be done in existing systems beforehand, identifying and addressing the impact of project on organization and personnel etc. The project team analyzes the scope of the project and plans the schedule and resources

accordingly.

### ❖ Software/Project Design

In this step whole knowledge of requirements and analysis on the desk and design the project. The inputs from users and information gathered in requirement gathering phase are the inputs of this step.

### ❖ Development & Coding Process

This is programming phase. The implementation of software design starts in terms of writing program code in the suitable programming language and developing error-free executable programs efficiently.

### ❖ Testing & Process to Live.

Testing is done while coding by the developers and thorough testing is conducted by testing experts at various levels of code such as module testing, program testing. After testing we will upload the entire file on live server.
